

# INTELLIGENT IP-SOLUTION WITH CCTV AND FOG

Solution Partner

## WILL KEEP THE BURGLAR OUT

SECURED IN SECONDS

# AN INTELLIGENT MARRIAGE OF FOG PROTECTION AND CCTV

## CONNECT THE FOG CANNON TO THE INTERNET

Connecting the fog cannon to the Internet and exploiting the dramatic technological advances that are taking place within video surveillance opens new ways of using security fog protection. Securitas in Denmark believe they hold considerable potential.

## REMOTE ACCESS TO THE FOG CANNON VIA IP/INTERNET

**The IPCard enables you to connect with a fog cannon via the Internet - and to significantly expand the functionalities of fog cannon.**

### Important facts about PROTECT IPCard™

- IP-connection for remote analysis of the working state, and debugging via IntelliSuite (software)
- IPCard prevents wasted service calls and cuts service costs
- “Panic” function for immediate activation, for use in robbery situations
- Dedicated push-button on the PCB for easy fog elimination whilst safely powering down the alarm system before a service
- Push-button for testing and priming the fog cannon pump
- The IPCard can be mounted in all PROTECT models in seconds (except Xtratus)

## FOG CANNON MONITORED 24/7

One of the most obvious advantages of a fog cannon connected to the Internet, is its ability to service and monitor the customer's alarm system. The connection enables the control centre to monitor the machine 24 hours a day, and if a service visit is required, the alarm installation contractor is notified of any faults, tampering etc. prior to the visit. The technician will then know exactly what needs to be done, and what he needs to take with. This cuts costs while enhancing customer satisfaction.

## CONTROL CENTRE DISCHARGES THE FOG

Alarm installation contractors and control centres can prevent break-ins with intelligent and thermal cameras. The operator can then challenge the burglar, warn them and then discharge the fog depending on what is happening on the customer's premises.

As thermographic cameras can show the outlines of intruders in the fog it, is possible for the control centre to follow the burglars to the door after the fog has been discharged and eventually inform the police where the burglars are and what they are doing.

## STAFF DISCHARGE THE FOG

In shops staff will be able to protect themselves against assault by activating the security fog system manually by using a panic button or instructing the control centre to do so.

## ” CONSIDERABLE AND VERY REALISTIC NEW POTENTIAL

Security company Securitas, believe the new initiatives from PROTECT hold considerable potential. Managing director and president of Securitas in Denmark, Tom Laursen:

“After the advent of IP cameras, I see some very realistic potential for PROTECT’s security fog protection with IP, and combining the two is definitely creating new business opportunities which will undoubtedly be of benefit to both Securitas and our customers.”

### Solution Partner

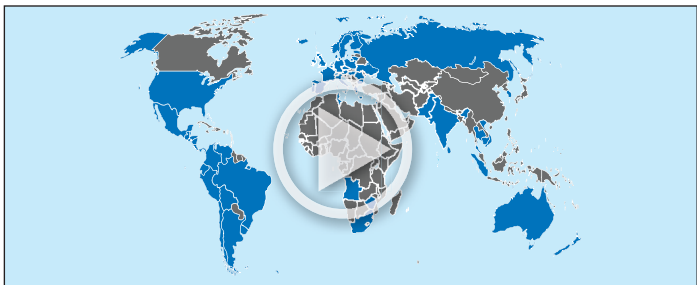

# EUROPEAN QUALITY - DANISH DESIGN

PROTECT is the bestselling security fog system and is the world and market leader in the security fog industry.

Our developmental and technical support is carried out by in-house experts in security fog protection and electronics - local and global.

We sell our highly innovative products through dedicated distributors and alarm installers in more than 50 countries.
